

PROBLEMAS DE QUÍMICA

EQUILIBRIO QUÍMICO

EXEMPLO 9: Escribe a expresión do produto de solubilidade, K_s , para os seguintes compostos: BaSO₄, CaF₂, Ag₂CrO₄, Fe(OH)₃, PbCrO₄.

$$K_s = [\text{Ba}^{2+}_{(\text{aq})}] \cdot [\text{SO}_{4}^{2-}_{(\text{aq})}]$$

$$K_s = [\text{Ca}^{2+}_{(\text{aq})}] \cdot [\text{F}^{-}_{(\text{aq})}]^2$$

$$K_s = [\text{Ag}^{+}_{(\text{aq})}]^2 \cdot [\text{CrO}_{4}^{2-}_{(\text{aq})}]$$

$$K_s = [\text{Fe}^{3+}_{(\text{aq})}] \cdot [\text{OH}^{-}_{(\text{aq})}]^3$$

$$K_s = [\text{Pb}^{2+}_{(\text{aq})}] \cdot [\text{CrO}_{4}^{2-}_{(\text{aq})}]$$
